Cybersecurity Practical Task For Entry Level

TASK 1

Set Up a Basic Cybersecurity Lab

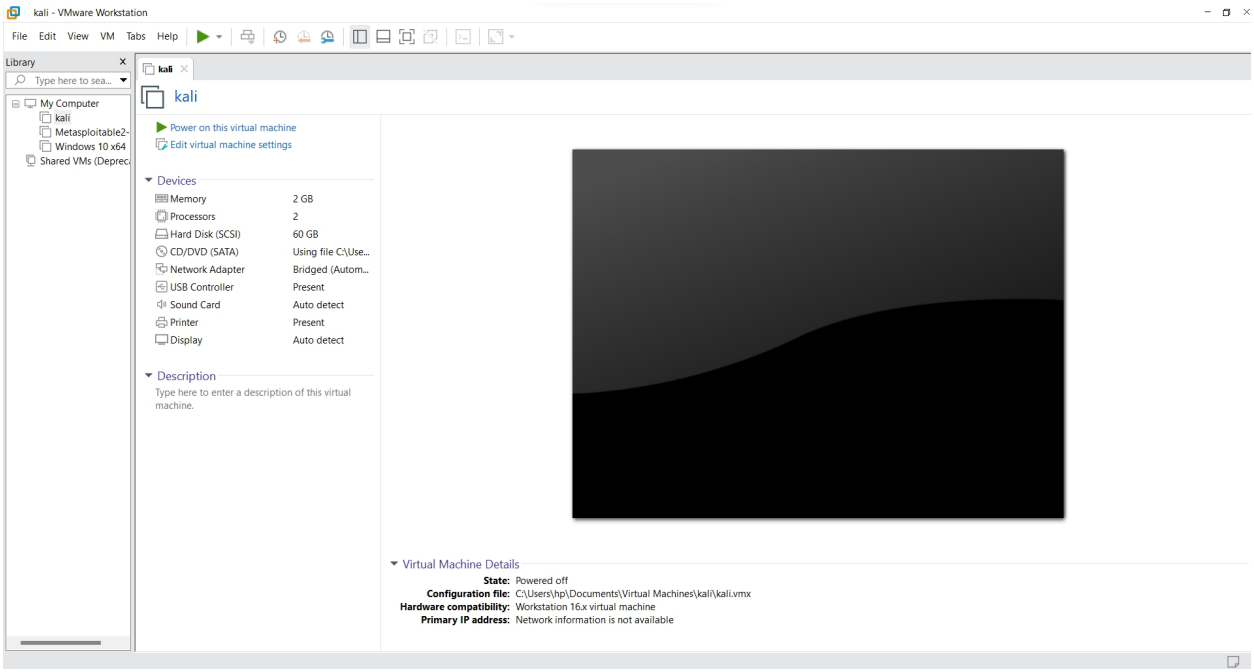
Install and configure a safe practice environment.

What to do:

1. **Install VirtualBox or VMware**
2. **Install Kali Linux**
3. **Install a vulnerable machine like Metasploitable**

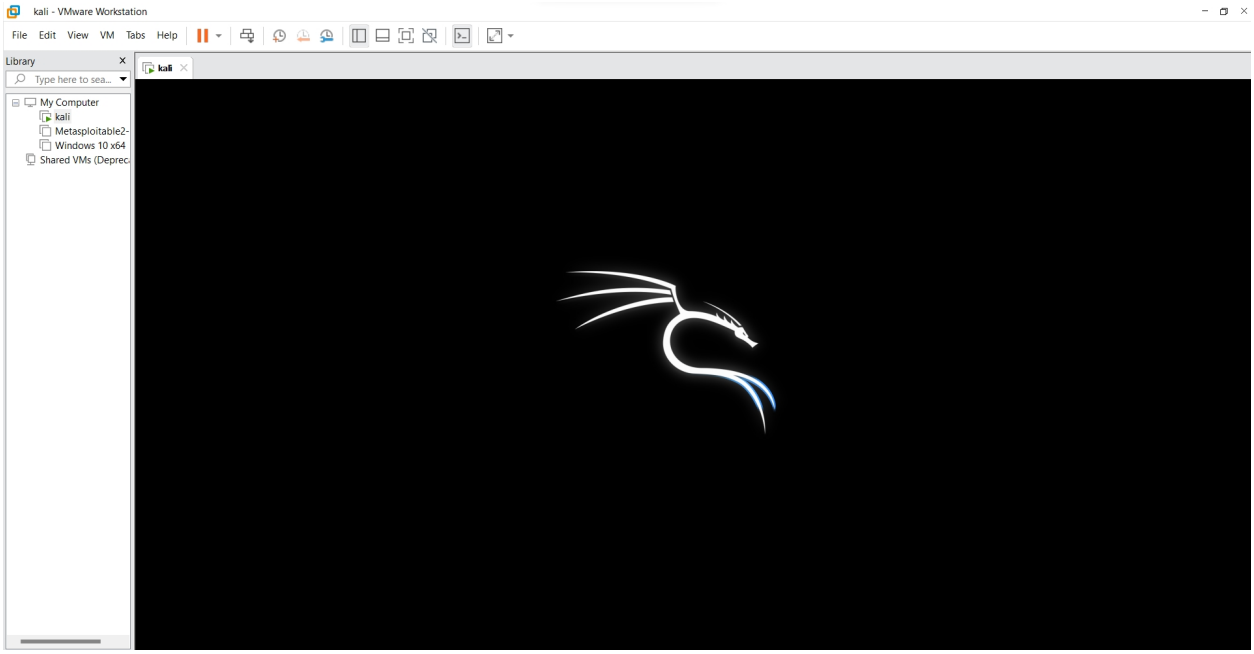
Lets get down to it:

1 Installation of VMware

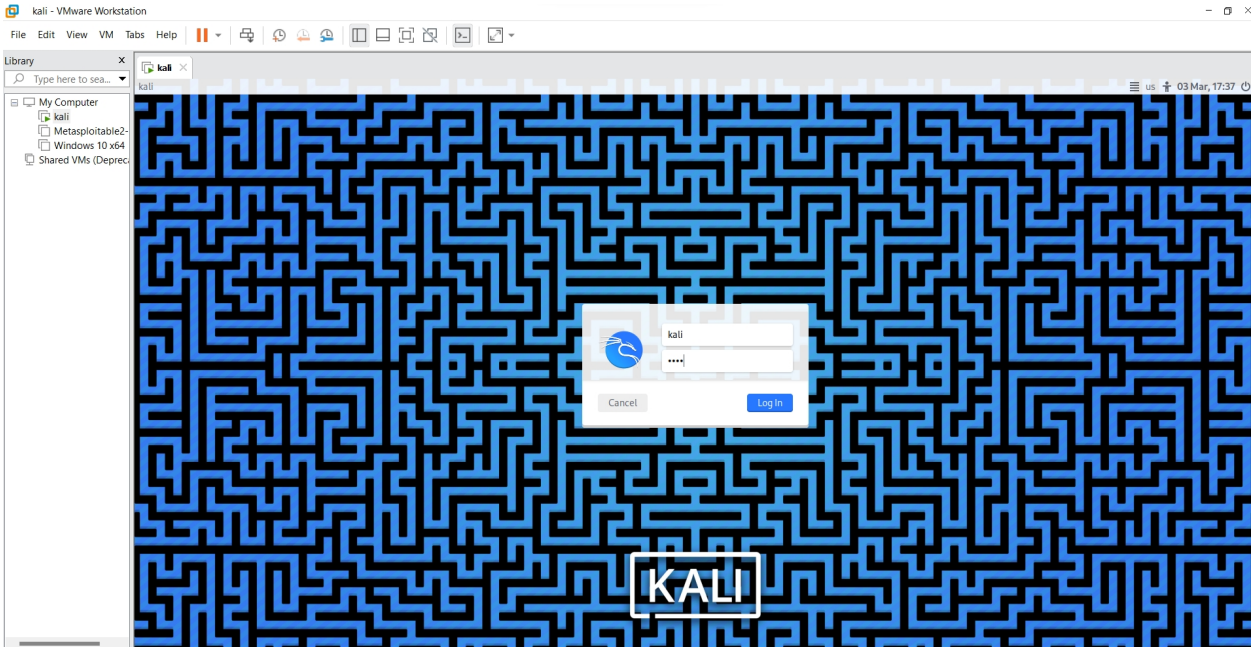


Installation of VMware was successful, Coudnt get VitualBox Package So i install VMware instead as seen in the picture, i already install kali linux too. The Package came with 2GB memory, 2 Processors and Hard Disk 60 GB.

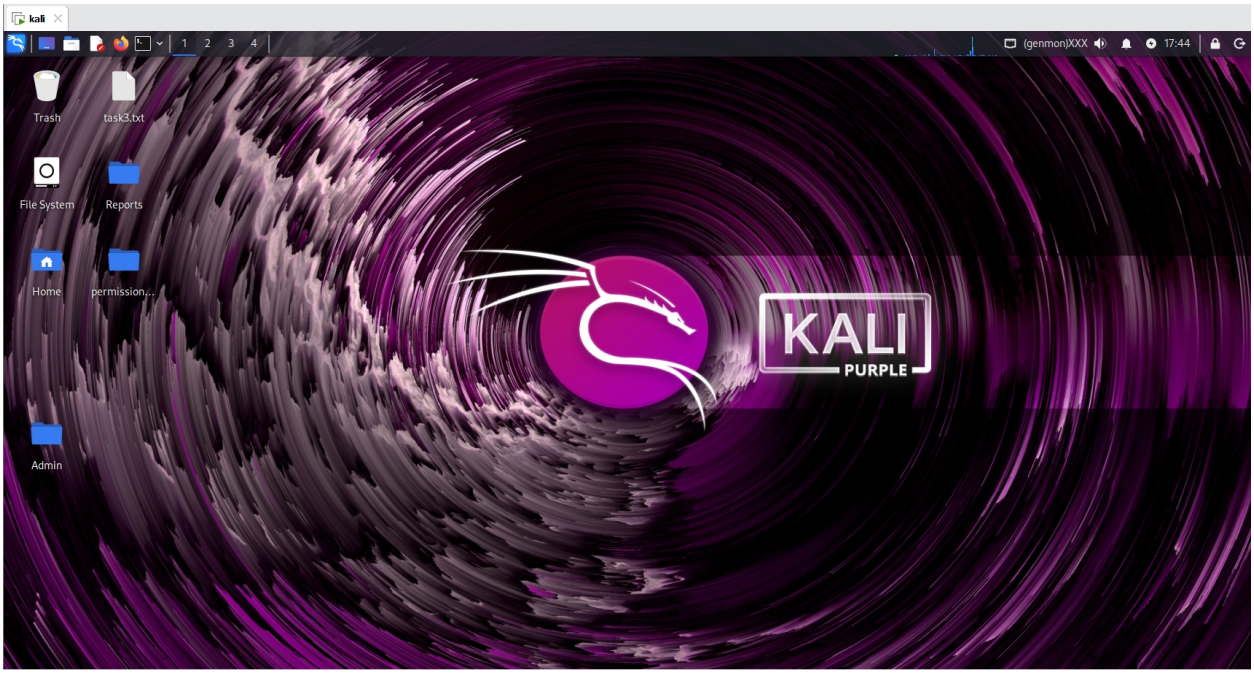
2 Install Kali Linux



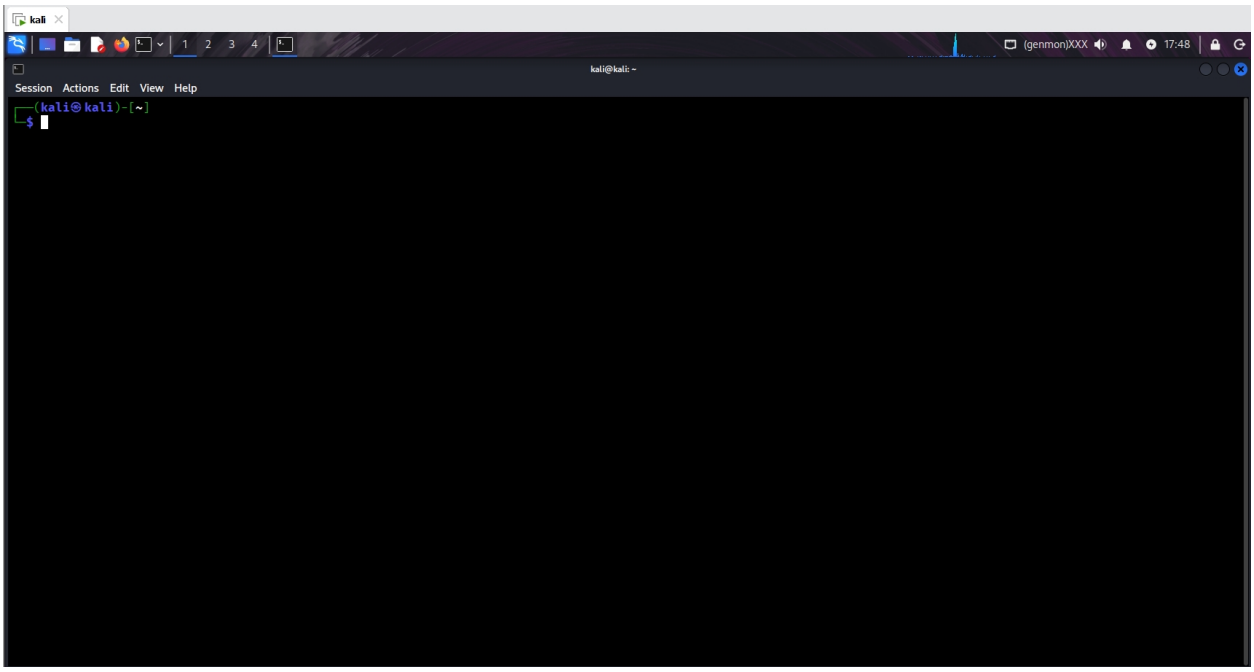
This is the View of pre-luanch Kali Linux Operating System



I was asked to create a username and password, which i did.

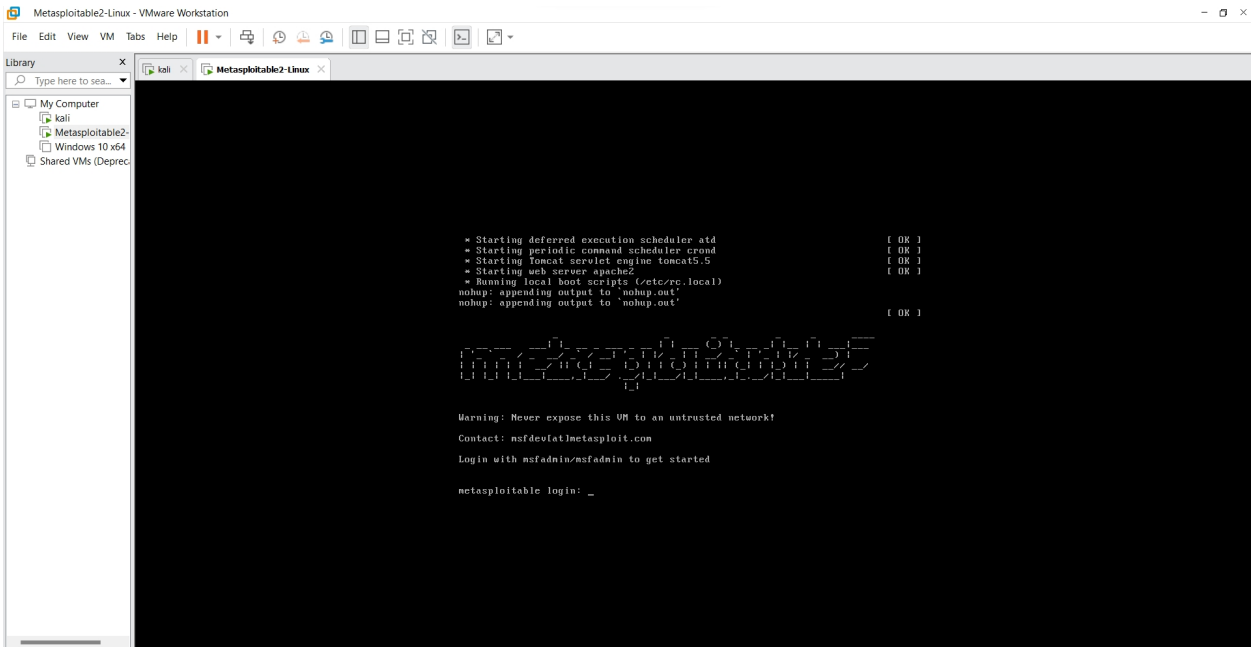


This the home interface of kali linux.

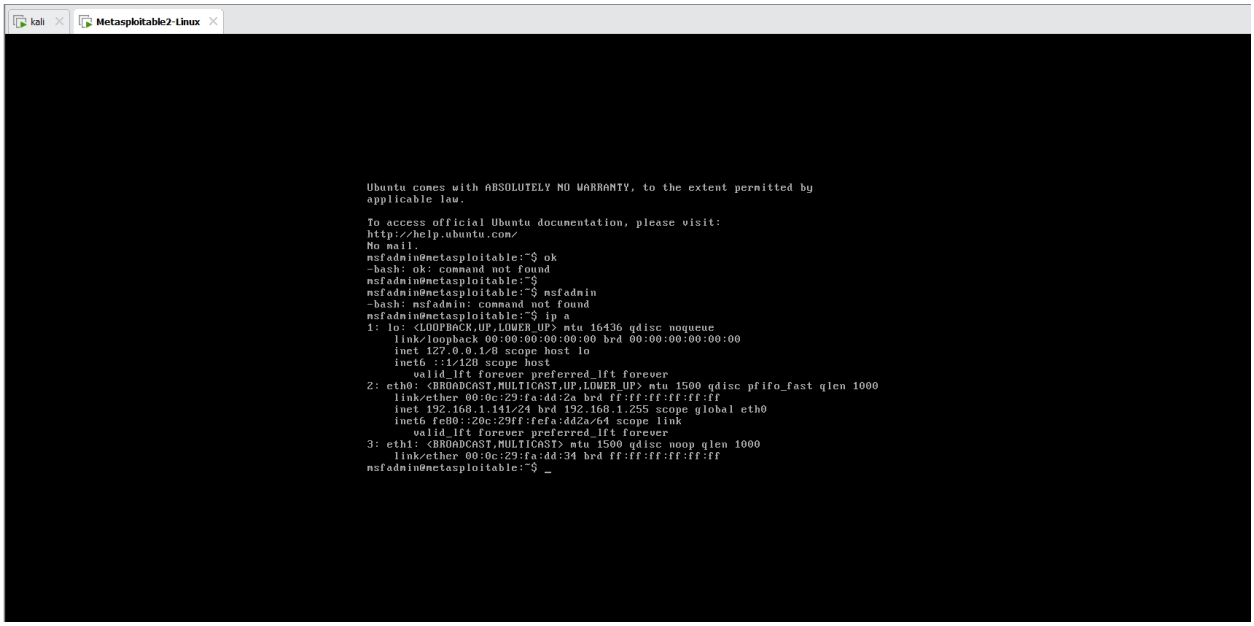


THis is session interface, this is the real working space where you run commands.

3 Install a vulnerable machine like Metasploitable



Installation of metasploitable as succesfull, its display an interface where i logging with username and password provided.



I try to run the command: ip a to display my metasploitable IP address and it work perfectly as it was displayed in the image.

<u>GOALS:</u>

On this task, i learn how to install a VM machine which can host multiple operatinf systems like kali linux, Window 10, Metasploitable and so on. I also learn how to install Kali Linux operating system and i navigated its interface both the pre luanch and working interface. On this task i also learn how to install and get familier with metasploitable machine, i run a command on it which is "ip a" to display my IP address which was succesful.
